

Fake it 'till you make it

Zarr-like Access of Existing NetCDF4 Datasets

Lucas Sterzinger Mentors: Chelle Gentemann (Farallon Institute), Julia Kent (NCAR), Kevin Paul (NCAR) July 28, 2021

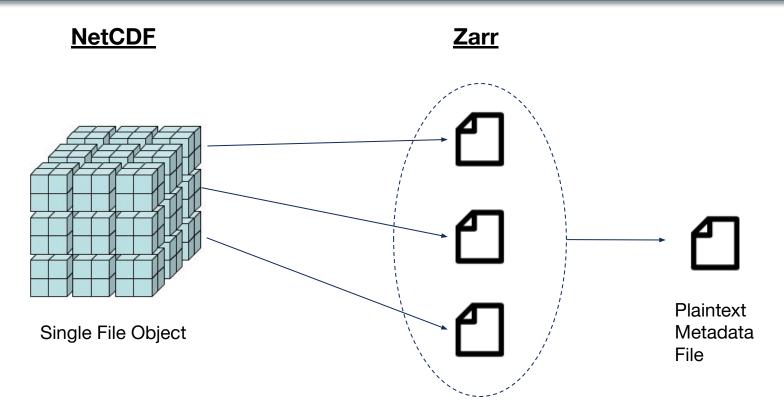

The Problem

- Peta(Exa?)bytes of geophysical data now available in the cloud
- Much of the data are in NetCDF4/HDF5 format
 - Not efficient for cloud computing

NetCDF vs Zarr

Multiple File Objects (One per chunk)

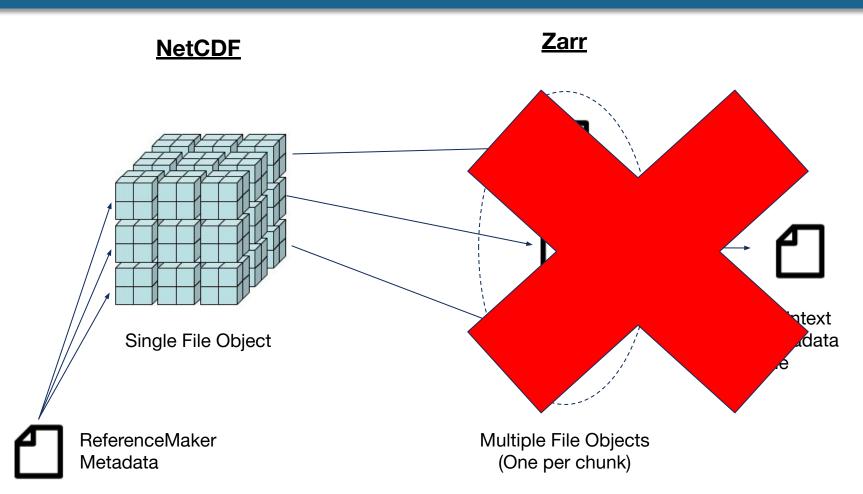

ReferenceFileSystem

ReferenceMaker/ReferenceFileSystem:

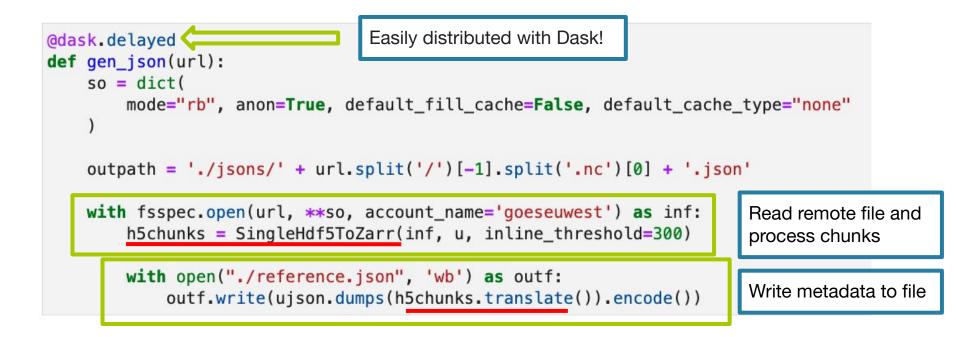

- Part of Intake group's **fsspec** project
- Access existing NetCDF/HDF files as if they are Zarr
- Zarr-like Metadata files (few MB each)
 - Remote file address (Azure Blob, AWS S3, etc)
 - Data variable and chunking info
- Extracts byte-ranges for individual variables/chunks
 - Instead of individual chunk files in Zarr

ReferenceMaker

Creating JSONS

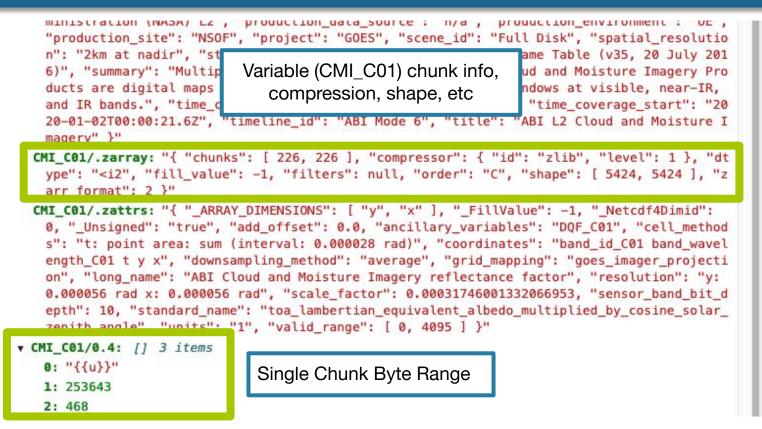

Reference JSON Example

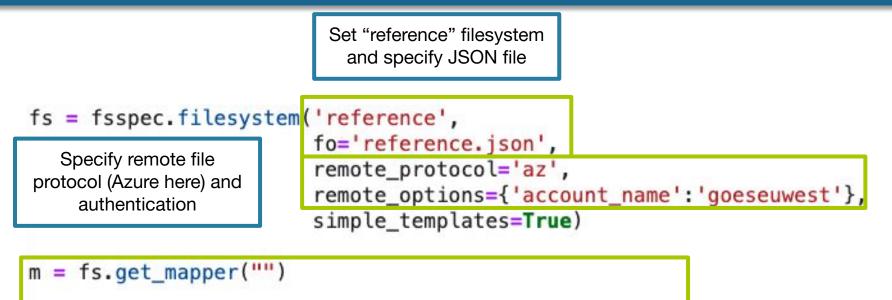

<pre>u: "az://noaa-goes16/ABI-L2-MCMIPF/2020/002/00/OR_ABI-L2-MCMIPF-M6_G16_s20200020000216_e20 00020009524_c20200020010031.nc"</pre>	root: version: 1			Filter	Q

Reference JSON Example

Reference JSON Example

ds = xr.open_dataset(m, engine='zarr')

Pass mapper to xarray and specify Zarr engine

GOES Workflow

Data stored in same region as compute

Microsoft Planetary Computer

4 CPU, 32 GB Memory, 8 Dask Workers

- Created a test workflow on Microsoft Planetary Computer
- Analysis of 24 hours of GOES data
- Test access to data stored in Azure in 3 formats:
 - NetCDF4
 - NetCDF4 + ReferenceMaker
 - Zarr

GOES Workflow

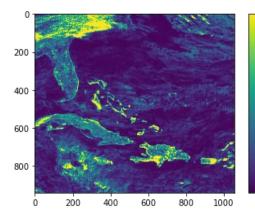

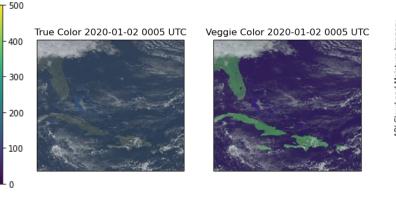

Data stored in same region as compute

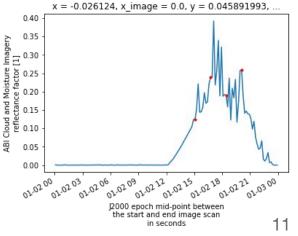

4 CPU, 32 GB Memory, 8 Dask Workers

GOES Processing Times

For 24 hours of GOES-16 "ABI-L2-MCMIPF" product data

<u>Format</u>	Preprocess Time	Data Open Time	Workflow Time	Extra Storage
Remote NetCDF4	0 min	10 minutes	40 min	0 GB
Zarr	1 h 38 min	30 seconds	4 min	52 GB
ReferenceFileSystem	1 h 25 min	35 seconds	5 min 30 s	<u>416 MB</u>

- NetCDF has no upfront preprocess time cost
 - But very slow open and workflow times
- Zarr comes at cost of high storage costs (full data duplication)
- ReferenceFileSystem has speed of Zarr but <a>

 </style="text-align: center;">
 - Reference file can be compressed further

The Implications

- ReferenceMaker/FileSystem harnesses the cloud-optimization
 of Zarr without converting any data
- Allows current institutions to cheaply make existing cloud-hosted data more optimized
- Reference files can be also created, hosted, and shared by third parties
- Automatable
 - e.g. Pangeo Forge

Future Work Needed

- Project is still in early development
- Test compatibility across different datasets
- Scale to larger datasets and compare performance to Zarr
- Test performance on a local parallel filesystem (like GLADE)

Acknowledgements

Thank you to the ReferenceFileSystem team!

- Special thanks to Martin Durant (Anaconda) and Rich Signell (USGS) for their help learning and contributing to this project
- <u>https://github.com/intake/fsspec-reference-maker</u>

Thank you to Kevin Paul (NCAR), Julia Kent (NCAR), and Chelle Gentemann (Farallon Institute) for their amazing mentorship through the SIParCS program

Thanks to the SIParCS team for working so hard to make a fully-online internship experience so successful

Thanks to Microsoft for providing credits for Planetary Computer

Please feel free to reach out with questions <u>Isterzinger@ucdavis.edu</u> or twitter <u>@lucassterzinger</u>
