

# Interactive Visualization of Ensemble Data Assimilation Forecasts for Hydrology Models

**Ameya Patil,**  
SIParCS Summer Intern | University of Washington, Seattle

**Mentors: Marlee Smith, Helen Kershaw, Moha Gharamti**

**NCAR  
UCAR**

**August 1, 2023**

# Hydrology Forecasting

Predicting the behavior of water systems

## Hurricanes

- Tropical storms, 75 mph to > 150 mph
- 2.5 trillion gallons of rain per day
- Flood rivers and lakes
- Damage to life and property

A vehicle sits partially submerged in a flooded downtown following Hurricane Ian, in Orlando, Florida, September 29, 2022. [Gary Bogdon, EPA-EFE]

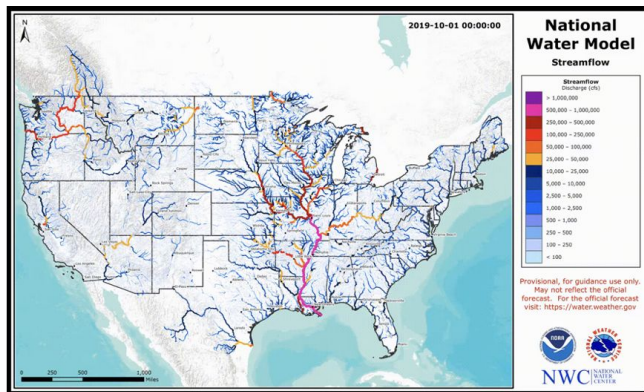

A family walking through a flooded street in Batabano, Cuba, on September 27, 2022, during the passage of hurricane Ian [Y. Lage, AFP]

Hurricane Ian: 150 deaths, > \$112 billion in damages

# WRF-Hydro<sup>1</sup> Modeling System

- An open source community model
- Understand and predict water system behaviors
- Address issues relating to water availability, quality and hazards
- Used for forecasting floods during hurricanes Ian and Florence

Streamflow (cfs) simulation over CONUS for 2019-20 water year

# Interactive Visualization of **Ensemble Data Assimilation Forecasts** for Hydrology Models

# What is Ensemble Data Assimilation Forecasting?

A sequential approach combining **multiple sources of information** about a system, with a **model of the system** to **estimate the dynamical state** of the system

# Why is ensemble forecasting challenging?

- Huge number of data points to be processed
  - High dimensional models
  - Large number of observations
  - Data Assimilation Research Testbed (DART)<sup>1</sup> to the rescue!

NCAR | DART

1 - <https://dart.ucar.edu/>

# Why is ensemble forecasting challenging?

- Sources of uncertainty

Model uncertainty

Instrument uncertainty

Initial value uncertainty

Inflation

# Why is ensemble forecasting challenging?

- Huge number of data points to be processed
  - High dimensional models
  - Large number of observations
  - Data Assimilation Research Testbed (DART)<sup>1</sup> to the rescue!
- Multiple sources of uncertainty
- Highly critical when used with context

NCAR | DART

# Interactive Visualization of Ensemble Data Assimilation Forecasts for Hydrology Models

# How do interactive visualization dashboards help?

- Make fast and reliable data driven decisions
- Interactivity < 500 ms response time
- For ensemble data assimilation forecasts
  - Inspect different forecasted variables
  - Understand the uncertainty in the forecasts
  - Investigate the performance of selective models in the ensemble
  - Investigate the performance of data assimilation process
  - Understand contextual significance of the forecasts

## User Interface Controls

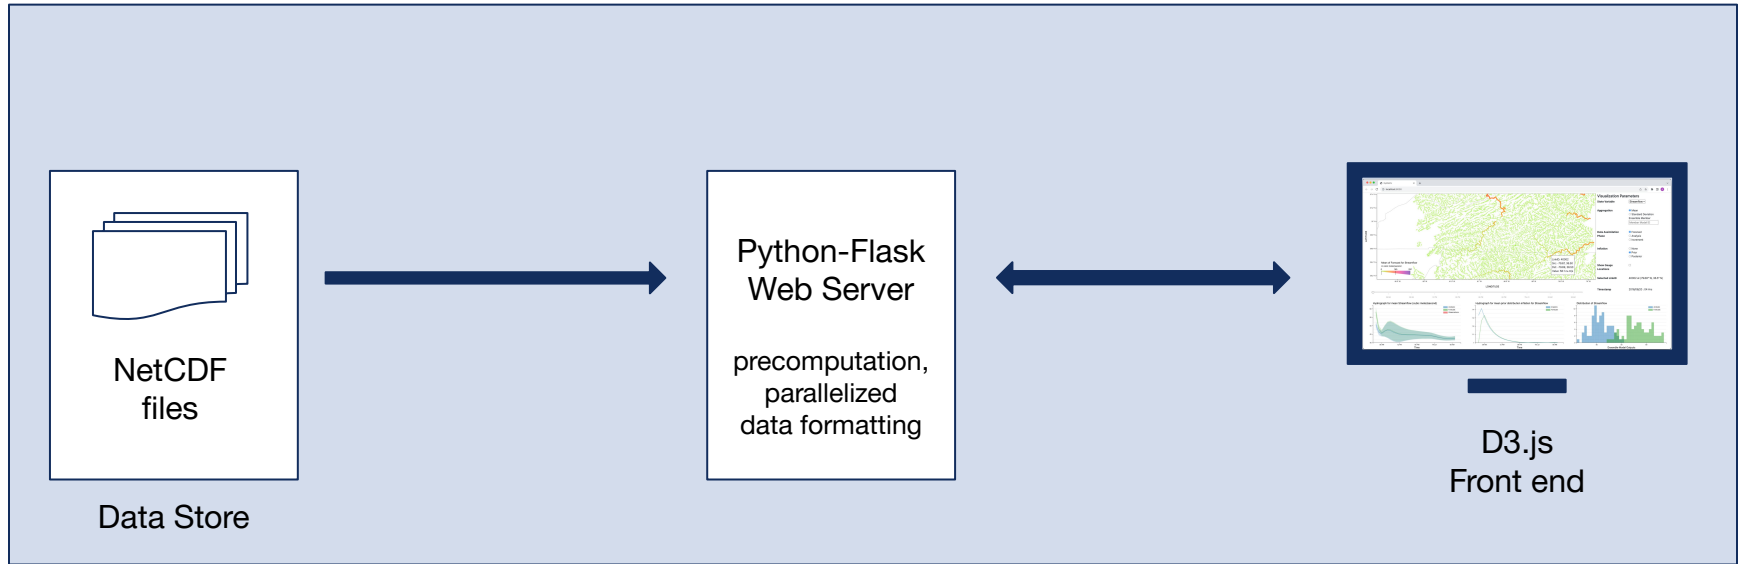

# How is HydroVis designed?

User machine

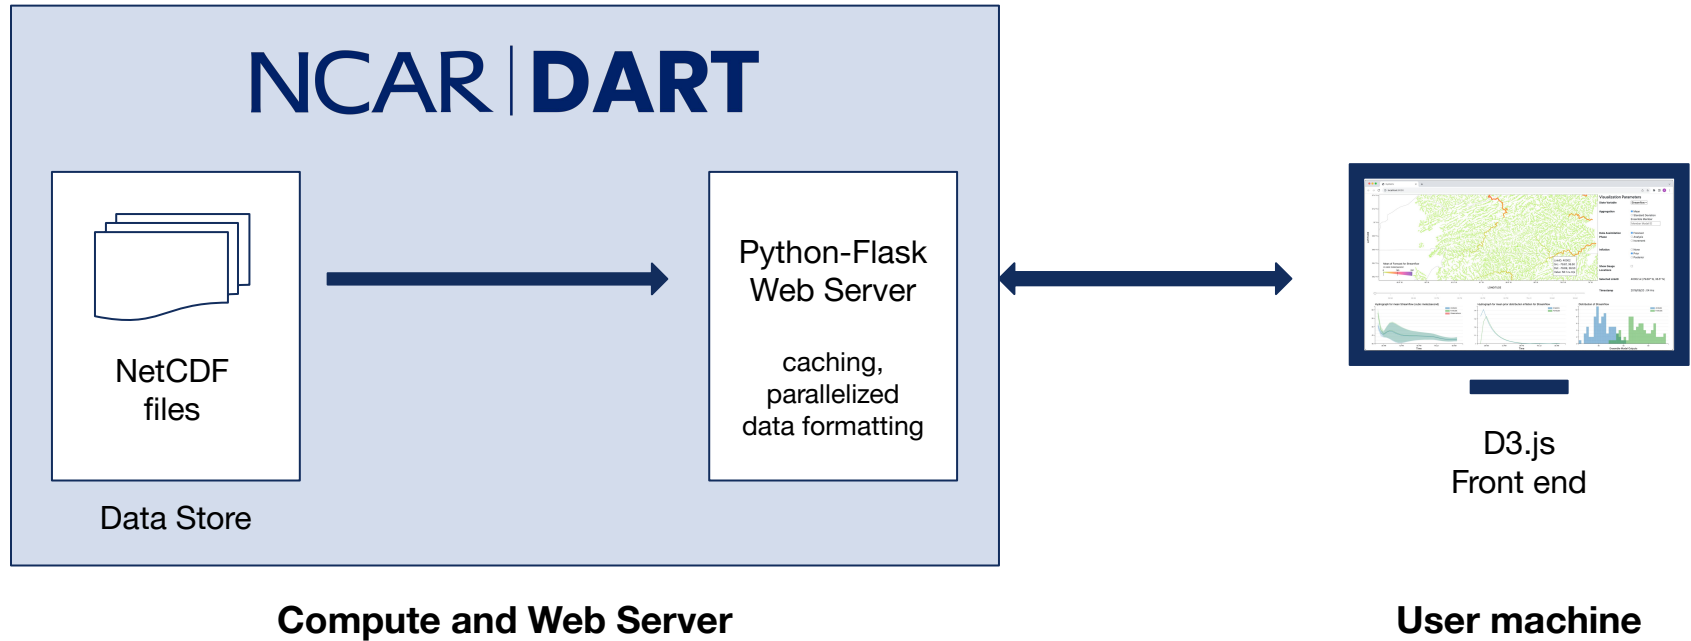

# Future Work

User machine

# Future Work

# Future Work

## Visualization changes

- Open loop data to gauge the efficacy of data assimilation
- Uncertainty visualization constructs
  - hypothetical outcome plots
